

# ANJALI AWADHYA

UI/UX DESIGNER • RESUME & INTERVIEW PREPARATION

| Location                        | Education | Focus                  |
|---------------------------------|-----------|------------------------|
| Bhopal / Indore, Madhya Pradesh | MCA       | UI/UX • Product Design |

## Professional Summary

Aspiring UI/UX Designer with an MCA background and structured UI/UX training in Figma, wireframing, prototyping, design systems and usability. Previous IT analyst experience developed research, documentation, process tracking, proposal writing and coordination skills. Now focused on practical user-centered design and building polished mobile-app case studies.

## Career Objective

To begin and grow a UI/UX or product-design career where I can solve real user problems, collaborate with teams, learn from feedback and contribute to clear, accessible digital experiences.

## Core Skills

|            |                                                                                      |
|------------|--------------------------------------------------------------------------------------|
| UX         | User research • User flows • Personas • Information architecture • Usability testing |
| UI         | Wireframing • High-fidelity UI • Design systems • Typography • Color • Spacing       |
| Tools      | Figma • Prototyping • Components • Auto Layout • Variables • Canva                   |
| Process    | Design thinking • Ideation • Iteration • Presentation • Documentation                |
| Additional | Research • Proposal writing • Process tracking • Communication                       |

## Experience

**Emerging Tech — Business / Operational Analyst** | IT / Federal Government Procurement Environment

Contributed to proposal and capture documentation, research, trackers and process coordination. Worked with shared project information, RFI-related documentation, certification/procurement research and structured workflow tracking. Developed transferable strengths in research, organization, requirements understanding, documentation and stakeholder coordination.

## UI/UX Learning & Projects

Structured UI/UX learning covering Figma, design thinking, wireframes, components, variants, Auto Layout, grids, prototypes, usability heuristics and case-study documentation. Practiced converting user needs into flows, wireframes, high-fidelity screens and interactive prototypes.

## Education & Course

**Master of Computer Applications (MCA)**

UI/UX Design Course — Figma, UX research, wireframing, prototyping, usability and design systems.

# 01 — Selected UI/UX Projects

## Wellness & Fitness Mobile App

Mobile wellness concept focused on simple daily routines. Work covered problem framing, user flow, wireframes, design-system thinking, high-fidelity screens and usability considerations.

Role: UI/UX Designer • Tools: Figma

## AI + Notion UX Project Management

Structured a UI/UX workflow using task phases, Kanban planning, priorities, deadlines, AI-assisted task generation/documentation and a mini design sprint.

Role: UI/UX Designer • Tools: Figma

## Mobile App Case Study & Prototype

Case-study workflow covering competitor research, user flow, low-fidelity thinking, high-fidelity interface design, design rationale and iteration.

Role: UI/UX Designer • Tools: Figma

## Portfolio narrative

Present each project as problem → research → user flow → wireframes → design decisions → prototype → testing → iteration → final outcome. Emphasize why decisions were made rather than only showing final screens.

## 02 — 15 UI/UX Interview Questions & Answers

The uploaded assignment asks for 15 questions covering design thinking, usability, wireframing, prototyping, research, behavioral/problem-solving scenarios, portfolio walkthroughs, developer collaboration and feedback. ■filecite■turn3file0■L19-L24■

### 1. Tell me about yourself and your UI/UX journey.

**Answer:** I have an MCA background and started professionally in an IT analyst environment, where I developed research, documentation, process tracking and structured problem-solving skills. I moved toward UI/UX because I enjoy understanding user problems and turning them into clear interfaces. I have built skills in Figma, wireframing, prototyping, design systems, usability and case-study presentation, and I am now looking to grow through real product work and feedback.

### 2. What is your design thinking process?

**Answer:** I follow an iterative process: understand the problem, research users and context, define the problem, generate ideas, wireframe, prototype, test and iterate. I do not assume the process is always linear. If testing disproves an assumption, I return to research or problem definition before polishing the UI.

### 3. How do you conduct user research?

**Answer:** I first define what I need to learn and then choose interviews, surveys, observation or competitor analysis as appropriate. I use neutral questions, look for repeated patterns and separate observations from assumptions. Findings are grouped into needs, pain points, behaviors and opportunities, which then inform design decisions.

### 4. Wireframe vs prototype?

**Answer:** A wireframe tests structure, hierarchy and content placement. A prototype connects screens and simulates interactions. Low-fidelity prototypes are useful for early flow testing, while high-fidelity prototypes help test realistic interaction and visual behavior.

### 5. How do you decide what belongs on a screen?

**Answer:** I start with the user's goal, identify essential information and prioritize it by importance and frequency. I create a clear hierarchy and make the primary action obvious. I also consider cognitive load, accessibility, responsive behavior and the surrounding user journey.

### 6. What usability principles do you consider?

**Answer:** I consider visibility of system status, consistency, clear feedback, recognition over recall, error prevention, user control and simple language. I check whether navigation is predictable and whether users can recover from mistakes.

### 7. How do you create a user flow?

**Answer:** I begin with the user's goal and entry point, map the necessary steps and include decisions, system responses and possible error states. I remove unnecessary steps and validate the flow with a simple scenario before detailed UI design.

### 8. How do you use Figma?

**Answer:** I use Figma for wireframes, high-fidelity UI, components, Auto Layout, grids, variables, prototypes and design-system documentation. Reusable components help maintain consistency and speed up iteration, while prototypes communicate interaction and user flow.

### 9. How do you work with developers?

**Answer:** I involve developers early to understand technical constraints. I communicate component behavior, states, spacing, responsive considerations and interaction rules clearly. I also welcome implementation feedback because technical constraints can reveal simpler and more scalable solutions.

### 10. How do you handle negative feedback?

**Answer:** I first understand the problem behind the feedback instead of defending the design. I check whether it is supported by user needs, business goals or technical constraints. If valid, I iterate; when opinions conflict, I use research, testing and agreed principles to guide the decision.

#### **11. Describe a challenging UX problem and solution.**

**Answer:** If users are dropping out of a process, I would first identify exactly where the drop-off occurs. I would review available data, observe users or run usability tests, form hypotheses, test focused changes and measure the result. This avoids redesigning the whole product based on assumptions.

#### **12. How do you prioritize features?**

**Answer:** I consider user value, business value, effort, dependencies and risk. Core features that solve important user problems come before nice-to-have features. I also prioritize enabling dependencies when one feature is necessary for several others.

#### **13. Walk me through a portfolio project.**

**Answer:** I start with the problem and target user, then explain research findings. I show the user flow and early wireframes, explain major design decisions, present high-fidelity screens and prototype, and finish with testing feedback and iterations. I focus on the reasoning behind the design.

#### **14. What if stakeholder opinion conflicts with research?**

**Answer:** I clarify the stakeholder's underlying goal and present the research evidence and its limitations. I look for a solution that addresses the user need while respecting the business constraint. If uncertainty remains, I suggest a small experiment or usability test before making a large commitment.

#### **15. Why should we hire you as a junior UI/UX designer?**

**Answer:** I bring technical education, structured professional experience and strong interest in user-centered design. My analyst background taught me research, organization, documentation and systematic problem-solving, while my UI/UX work has built practical Figma, flow, wireframe and prototype skills. I learn quickly, accept feedback and consistently work to improve.

## 03 — Final Interview Preparation Checklist

|   |                                                       |
|---|-------------------------------------------------------|
| ✓ | 30–60 second self-introduction                        |
| ✓ | Explain one complete portfolio project                |
| ✓ | Explain user research methods and limitations         |
| ✓ | Show wireframe → prototype → final UI progression     |
| ✓ | Explain one design decision using evidence            |
| ✓ | Describe a feedback/iteration example                 |
| ✓ | Explain Figma components, Auto Layout and prototyping |
| ✓ | Discuss developer collaboration and handoff           |
| ✓ | Prepare examples of problem-solving                   |
| ✓ | Prepare thoughtful questions for the interviewer      |

### Submission coverage

The assignment requires a PDF resume with UI/UX skills, experience, projects and certifications, plus a document containing 15 interview questions with well-structured answers. [filecite turn3file0 L26-L39](#) This combined PDF contains both sections.

Before final submission, add personal phone number, email, LinkedIn and portfolio URL if your institute requires them. These details were not present in the uploaded brief and therefore have not been invented.
